

Kaspersky IoT Secure Gateway

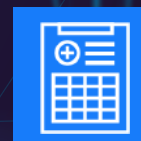

Cyber Immune gateways for connecting
MEDICAL EQUIPMENT
to clouds and business systems

Secure transmission of patients' laboratory research data from equipment (MRI, CT, X-ray machines and others) to the corporate segment of a local network

Protection of an expensive medical equipment:

- Prevention of downloading malicious software from a network or USB flash drive used by staff
- Prevention of the equipment involvement in botnets aiming to perform DDOS attacks
- Prevention of an access to equipment in order to perform a cyberattack to a corporate network

Additional notes:

- Creation of ecosystem using Kaspersky Lab products such as KISG+KUMA+KSRW+KICS+KSC to provide an end-to-end protection of a production line
- Centralized management of Kaspersky Lab products via Kaspersky Security Center
